William Burrión

Full-stack software engineer · 5 years

Tokyo, Japan

william.burrion@gmail.com | github.com/QPWilliam | LinkedIn | qpw-portfolio.vercel.app

Summary

Full-stack engineer with five years building web apps, mobile apps, APIs and chatbots across three Guatemalan companies. As development lead at Corporación Alisa, built from scratch the internal app used by ~10,000 employees, the head-office app integrated with SAP Business One, and a delivery app serving millions of users. Five apps shipped to Google Play and the App Store. Native Spanish, C1 English (TOEFL iBT 97), JLPT N3 Japanese.

Experience

Senior developer / Development lead | Corporación Alisa

February 2026 - September 2026 · Remote · Holding of ~12 businesses running the Pinulito restaurant chain

Employee app (~10,000 users, iOS and Android): payslips, store-visit logs, ordering and goods receipt, incident reporting, delivery routes, truck checklists and document scanning.

Head-office app (500-1,000 users): SAP Business One Service Layer integration for purchase requests and orders, multi-level approvals, quotations and multi-supplier ordering; Microsoft sign-in.

Delivery app (millions of users): order-ahead with in-store pickup, tiered loyalty points and Stripe payments. Migrated legacy PHP systems and built Power BI reporting.

Impact: accounting paperwork cut from two months to two days, human error -95%, paper use -90%; order-ahead pickup reduced in-store queue time by 80%.

Bot development specialist | iSoft-ste

June 2022 - June 2026 · Chatbot and customer-support software vendor

Ran requirements sessions with enterprise clients; designed and built WhatsApp and Facebook bots with their ticketing systems.

Built an in-house bot-building platform in Angular, Node.js and Express, connected to each client over APIs. Ran services on Google Cloud (Docker, Firebase, Cloud Functions).

Wrote proposals and technical documentation, handled post-launch support and built Power BI and Excel dashboards. Automating first-line responses reduced the support team's workload.

Full-stack developer | Plani-go

May 2021 - May 2022 · Property and facility management apps

Resident app (iOS and Android) with payments, invoices, news, financial reports and visitor registration; admin web portal for units, billing and reporting.

QR-based cleaning-staff app that replaced paper sign-in sheets and fed attendance and payroll. Database design and code review with PHP, Laravel, MySQL and React Native.

Technical skills

Languages: JavaScript and TypeScript (5+ yrs), SQL (5+ yrs), PHP (~2 yrs), Python, Java, Kotlin, Swift, Go, C#
Backend: Node.js and Express (~5 yrs), Laravel (~2 yrs), REST and GraphQL APIs
Frontend: Angular (4+ yrs), React, Next.js, Vue, Tailwind
Mobile: React Native with Expo - 5 apps published to Google Play and the App Store
Databases: PostgreSQL, MySQL, Oracle, SQL Server, MongoDB, Redis
Cloud: Google Cloud, Firebase and Docker (4+ yrs), AWS (~1 yr)
Integrations: SAP Business One Service Layer, Stripe, WhatsApp and Facebook APIs
AI: OpenAI API, Claude, Gemini, Ollama, TensorFlow - API integration and prompt design
Data and tools: Power BI and advanced Excel (4+ yrs), Git/GitHub, Postman, DBeaver, Jira, Notion, Figma

Languages

Spanish: native
English: C1 - TOEFL iBT 97 (2026)
Japanese: JLPT N3 (2025), studying toward N2

Education and certifications

2026 - present Akamonkai Japanese Language School, Tokyo
2021 - 2022 Systems Engineering, Universidad Mariano Gálvez, Guatemala (not completed)
2023 Deep Learning & Artificial Intelligence - Udemy

Side projects

Multi-site content platform (personal project)

Next.js 16, React 19, TypeScript, Prisma and PostgreSQL. One codebase serves several production sites with different brands, languages and visual identities: a multi-tenant data model, hreflang internationalisation, a custom editor and content publishing without redeploying.

Web catalogues and guides

Catalogues for a hardware store and an agricultural supplier, travel guides for young travellers and a blog about life in Japan, built with Astro, Next.js, PostgreSQL and Cloudflare.
